People Sight — Porter People Analytics Dashboards

Employee Sentiment (eNPS) and Hiring dashboards in one web app · data as of 31-Oct-2026 · generated 04-Nov-2026

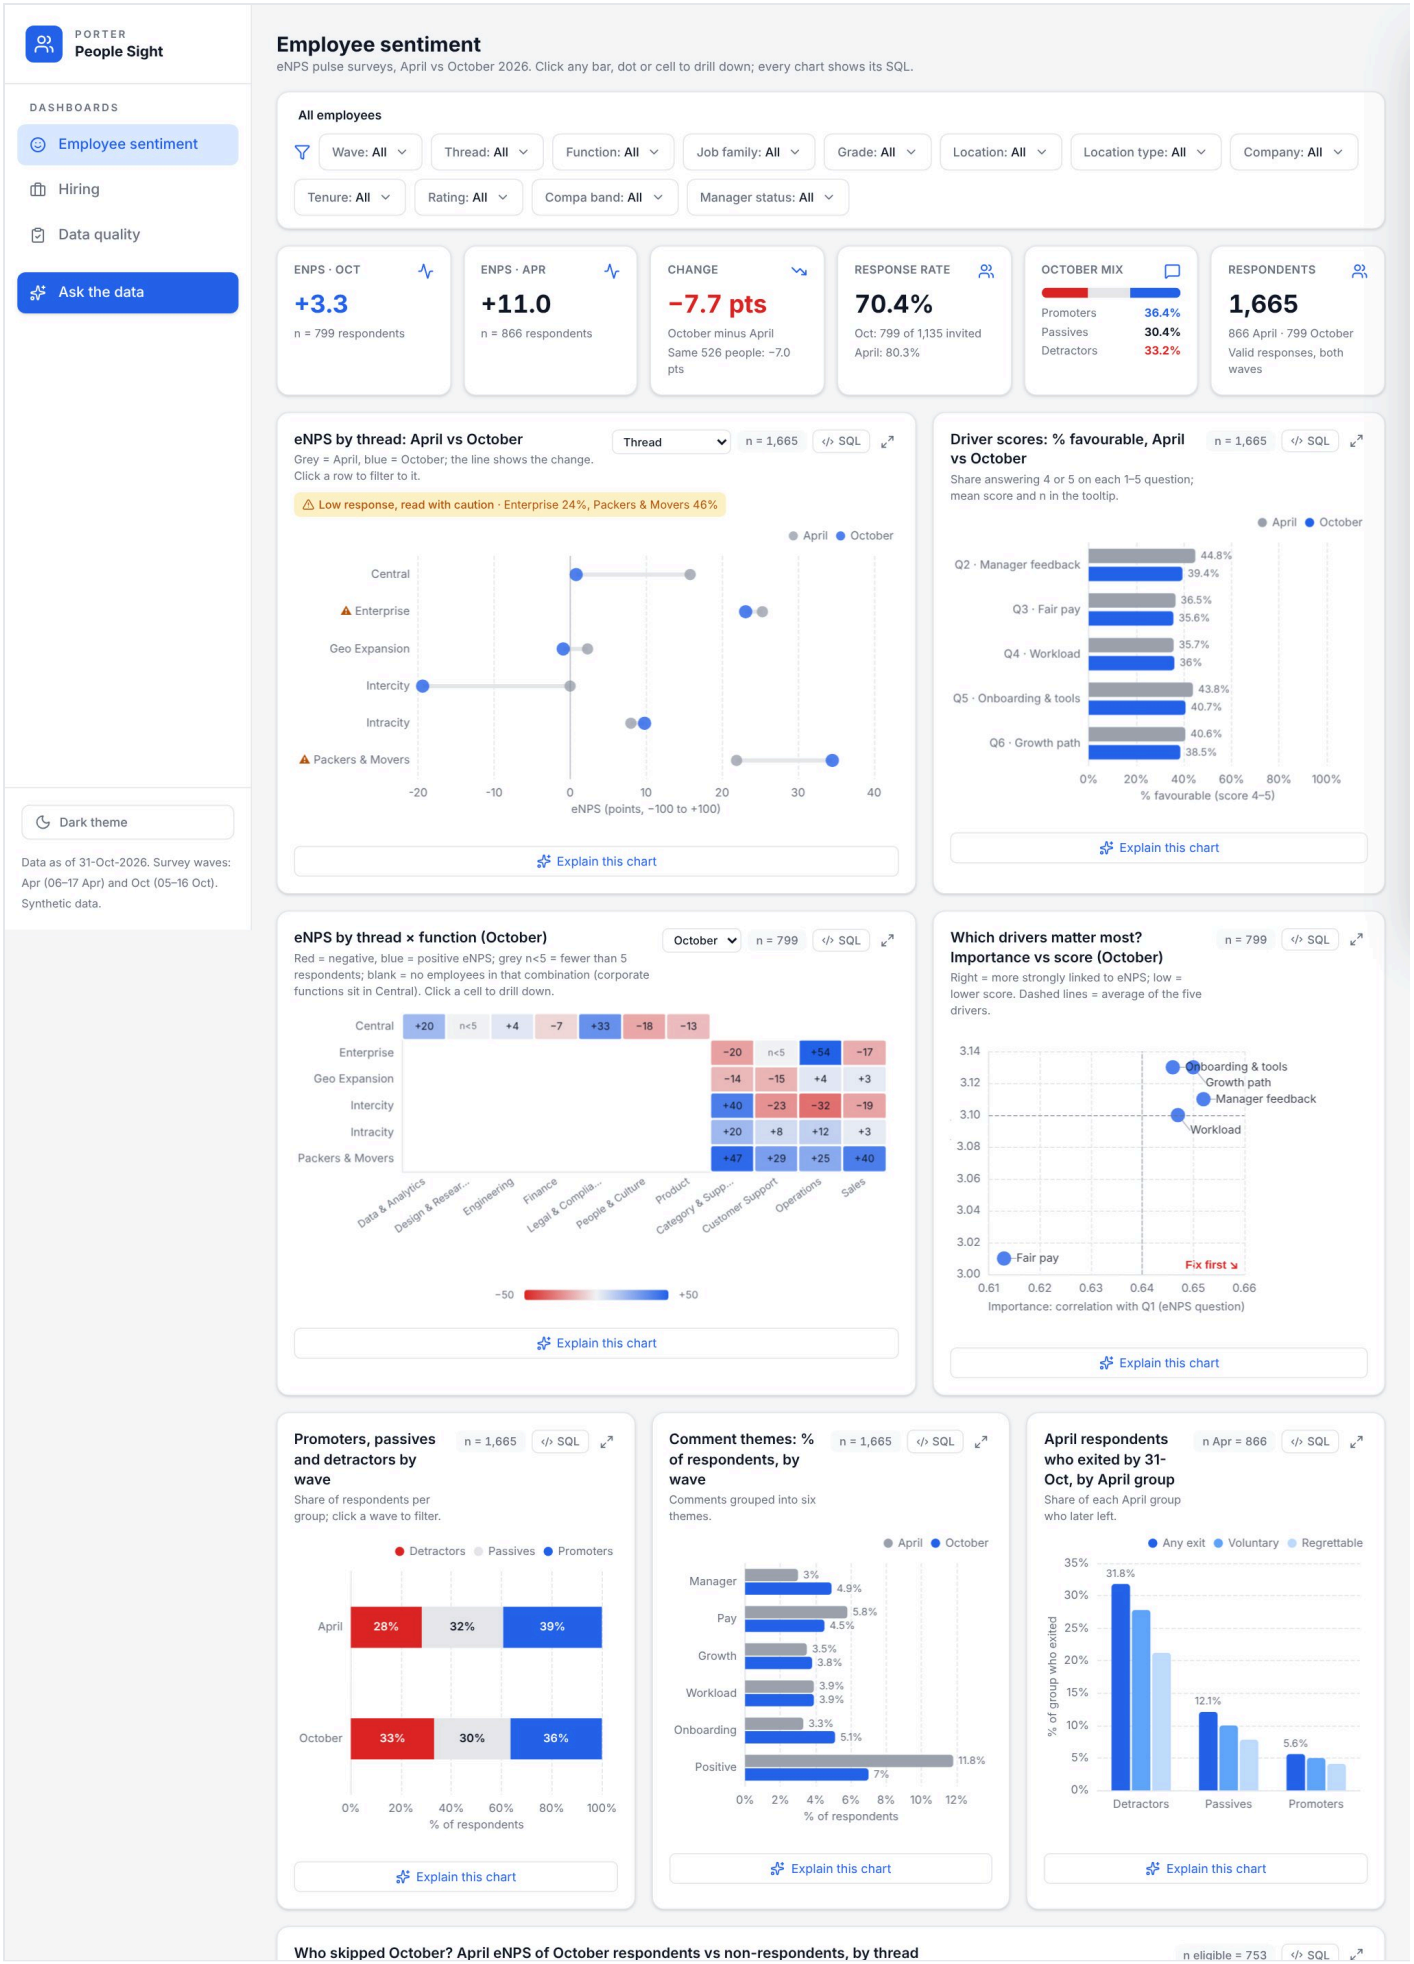

Live URL not set yet — re-run `python scripts/build_submission.py --url <render-url>` after deploying.

Dashboard #1 — Employee Sentiment	https://people-sight.onrender.com (pending deploy)/sentiment
Dashboard #2 — Hiring	https://people-sight.onrender.com (pending deploy)/hiring
Data quality	https://people-sight.onrender.com (pending deploy)/data-quality

How to use

- **Filters** (top bar): every filter is multi-select and applies to every KPI, chart and table on the page. Active filters show as chips — click × to remove one, or *Clear all*. Filters live in the URL, so a filtered view can be bookmarked or shared.
- **Drill-down**: click a bar, dot, heatmap cell, table row or month to add it as a filter; the breadcrumb shows the path. On Hiring, click a grade, source, recruiter or month.
- **Show SQL**: every panel has a *SQL* button showing the exact query that produced it (parameter values at the top). **n** badges give the base count; groups under 5 survey respondents show *n<5* to protect anonymity, and segments with a response rate under 50% carry a *Low response* warning.
- **Ask the Data** (sidebar, or *Ask* on a phone): type a question or pick a demo chip. The answer shows a chart, a one-line method, the SQL that ran and the rows; tick *Apply current dashboard filters* to scope it, and *Pin* an answer to the page. It is read-only, never shows individual survey answers and refuses questions about a named person.
- **Enlarge** any chart with the expand icon; **Dark theme** toggle at the bottom of the sidebar. Works on phones (filters and tables scroll sideways).

Ask the data

Dark theme

Data as of 31-Oct-2026. Survey waves: Apr (06–17 Apr) and Oct (05–16 Oct). Synthetic data.

Hiring

Requisitions raised 01-Apr to 15-Oct-2026, status as of 31-Oct-2026. SLA status is recomputed from the README definition. Click bars, rows or grades to drill down.

All requisitions

Thread: All | Function: All | Grade: All | Location: All | Recruiter: All | Source: All | Position type: All | Criticality: All | Req status: All | Raised from: Any | Raised to: Any

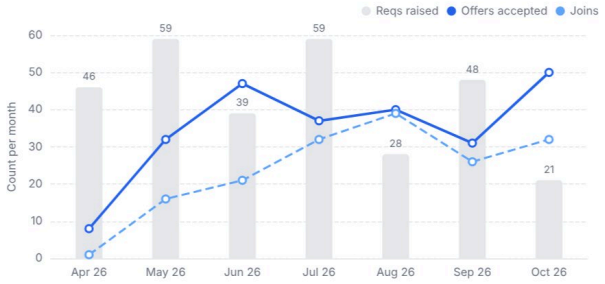

REQS RAISED	OPEN REQS	FILLED	MEDIAN TIME TO FILL	FILLED WITHIN SLA
300	61	231	25 d	75.8%
8 on hold or archived	37 already past SLA	167 joined · 64 yet to join	n = 231 filled reqs Raised → offer accepted	of 231 filled (recomputed)

OFFER ACCEPTANCE	JOINING RATE	AGENCY FEES	OPEN PAST SLA	APPLICANTS
82.8%	92.3%	₹8.07 L	37	5,757
245 accepted of 296	167 joined of 181 due by 31-Oct	18 agency joiners × 8.33% of CTC	of 61 open reqs	Candidate applications on these reqs

Reqs raised vs offers accepted vs joins, by month

n reqs = 300 | SQL

Reqs by month raised; offers by month accepted; joins by month joined. Click a month to filter to reqs raised then.

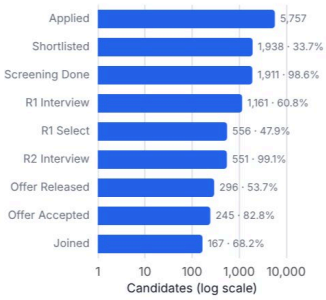

Explain this chart

Candidate funnel by stage

n candidates = 5,757 | SQL

Label = candidates · % of the previous stage (log scale so late stages stay visible).

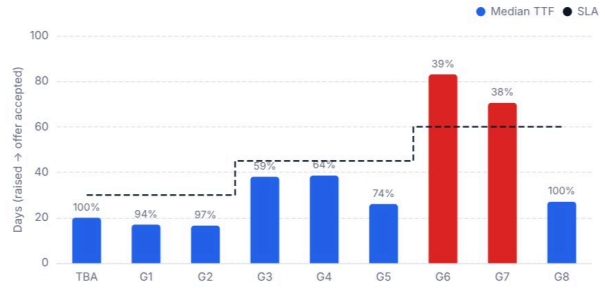

Explain this chart

Median time to fill by grade vs SLA

n reqs = 300 | SQL

Bars = median days from req raised to offer accepted (red = above SLA); dashed line = SLA; label = % filled within SLA. Click a grade to drill down.

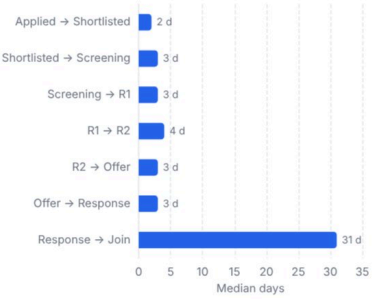

Explain this chart

Where the days go: median days per stage

n candidates = 5,741 | SQL

Between consecutive stage dates (valid order only). Response → join is mostly the notice period.

Explain this chart

Source effectiveness: volume, conversion, speed and cost by source

n candidates = 5,757 | SQL

Hire = candidate who filled a req (joined or yet to join). Agency cost per joiner = 8.33% fees ÷ agency joiners. Click a row to filter.

Source	Applicants	Hires	Applicant → hire	Median TTF	Offer acceptance	Agency cost / joiner
Agency	1,729	29	1.68%	26 d	64.0%	₹44,839
Naukri	1,702	50	2.94%	24 d	82.8%	—
Employee Referral	857	93	10.85%	23 d	87.4%	—
Careers Page	594	12	2.02%	25.5 d	75.0%	—
LinkedIn	578	18	3.11%	33.5 d	90.9%	—
Internal (IJP)	297	29	9.76%	25 d	93.9%	—

Explain this chart

Recruiters: fair comparison per assigned req, plus attainment vs target

n reqs = 300 | SQL

Compare recruiters on the per-req columns (filled %, median TTF, % within SLA, accepted offers per req). Attainment = accepted offers per month (Apr–Oct, 7

Dashboard #2 — Hiring — full page (https://people-sight.onrender.com (pending deploy)/hiring), continued (2)

months) ÷ monthly target, shown counting all accepted offers and excluding backed-out candidates. Click a row to filter.

Recruiter	Reqs assigned (share)	Filled %	Median TTF	Filled within SLA	Open past SLA	Accepted offers per req	Target per month	Attainment (all accepted)	Attainment (excl. backed out)
Rhea Kapoor	106 (35.3%)	81.1%	23 d	76.7%	14	0.85	14	91.8%	87.8%
Vikram Nair	44 (14.7%)	72.7%	26 d	87.5%	5	0.80	8	62.5%	57.1%
Tanvi Joshi	35 (11.7%)	82.9%	25 d	75.9%	3	0.89	10	44.3%	41.4%
Karan Bhat	32 (10.7%)	84.4%	20 d	88.9%	3	0.84	8	48.2%	48.2%
Imran Sheikh	30 (10%)	63.3%	27 d	68.4%	6	0.70	10	30.0%	27.1%
Divya Menon	28 (9.3%)	71.4%	52 d	45.0%	4	0.75	7	42.9%	40.8%
Arnav Gupta	15 (5%)	86.7%	17 d	84.6%	0	0.93	7	28.6%	26.5%
Meghna Rao	10 (3.3%)	50.0%	49 d	40.0%	2	0.60	10	8.6%	7.1%

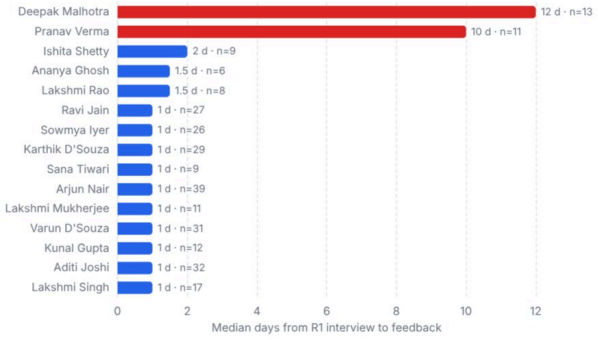

Note: attainment depends on how many reqs a recruiter is given — a recruiter with few reqs cannot reach a fixed monthly offer target, so low attainment can mean low load rather than low performance.

Explain this chart

15 slowest R1 interviewers: median days to submit feedback

n interviews = 1,144 · SQL

Interviewers with at least 5 interviews with feedback; red = median over 2 days. Names from People_Directory (hiring data only).

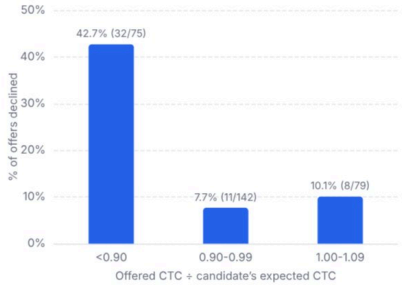

Explain this chart

Offer declines by offered ÷ expected CTC

n offers = 296 · SQL

Share of offers declined in each band of offered CTC relative to what the candidate expected.

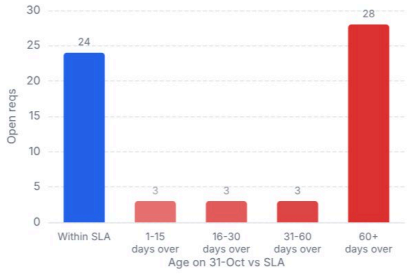

Median offered ÷ expected CTC: accepted 0.95 (n = 245) vs declined 0.90 (n = 51). Median offered ÷ budget max: 0.82 vs 0.83 — offers sit well under budget.

Explain this chart

Open reqs on 31-Oct: how far past SLA

n open reqs = 61 · SQL

Age of each open req (31-Oct – raised) compared with its SLA days.

Explain this chart

SLA status: ATS system vs recomputed

n reqs = 300 · SQL

The recomputed status (TTF ≤ SLA days; open reqs breached when age > SLA) is used everywhere. Highlighted rows disagree with the ATS.

ATS status	Recomputed	Reqs	Mismatch
Within SLA	Within SLA	175	No
Breached	Breached	42	No
Open - Breached	Open - Breached	37	No
Open - Within SLA	Open - Within SLA	24	No
Within SLA	Breached	14	Yes
(blank)	(blank)	8	No

Req	Grade	Recruiter	TTF	SLA	Over SLA	Backout
REQ_5607	G7	Divya Menon	146 d	60 d	86 d	
REQ_5365	G3	Rhea Kapoor	91 d	45 d	46 d	
REQ_5312	G3	Divya Menon	87 d	45 d	42 d	
REQ_5647	G3	Imran Sheikh	83 d	45 d	38 d	
REQ_5656	G3	Tanvi Joshi	83 d	45 d	38 d
