People Sight

What the April and October 2026 data say about sentiment and hiring at Porter

For the CHRO

The eNPS fall is not company-wide. It sits in the Intercity teams reorganised in June and in new joiners; if those groups scored like their same-manager colleagues, October eNPS would be +13.1 instead of +3.3.

For the TA Head

Hiring loses candidates to slow R1 feedback (13 of 37 candidates of the two slowest interviewers withdrew) and to low offers (42.7% of offers below 0.90× expectation declined); senior roles lose time before anyone applies.

For the CHRO and TA Head · data as of 31-Oct-2026 (synthetic case data) · every number shows its base n in the slides that follow

Two fixable groups explain the eNPS fall, and three process gaps cost hiring speed and candidates

Company eNPS +11.0 → +3.3 (n = 866 / 799); the same 526 people: +20.2 → +13.1. Not significant company-wide (p = 0.06) — the fall sits in specific groups.

Sentiment

Manager change: eNPS -59.1 (n = 44) vs +13.0 with the same manager (n = 629); all 62 Intercity changes came in one June reorganisation.

Onboarding: 9.4% of under-6-month staff rate it favourably (n = 139) vs 47.3% of everyone else (n = 660).

Detractors leave: 27.8% of April detractors left voluntarily (n = 245) vs 5.0% of promoters (n = 340).

Hiring

Slow R1 feedback: 13 of 37 candidates of the two slowest interviewers withdrew vs 0 of 1124 for everyone else.

Low offers: 42.7% of offers below 0.90× expectation declined (n = 75) vs 8.6% (n = 221); 59 of 75 had budget headroom.

Senior roles: 54.2% of G6+ fills breached SLA (n = 24); the eventual hire applies 40 days after the req is raised vs 5 overall.

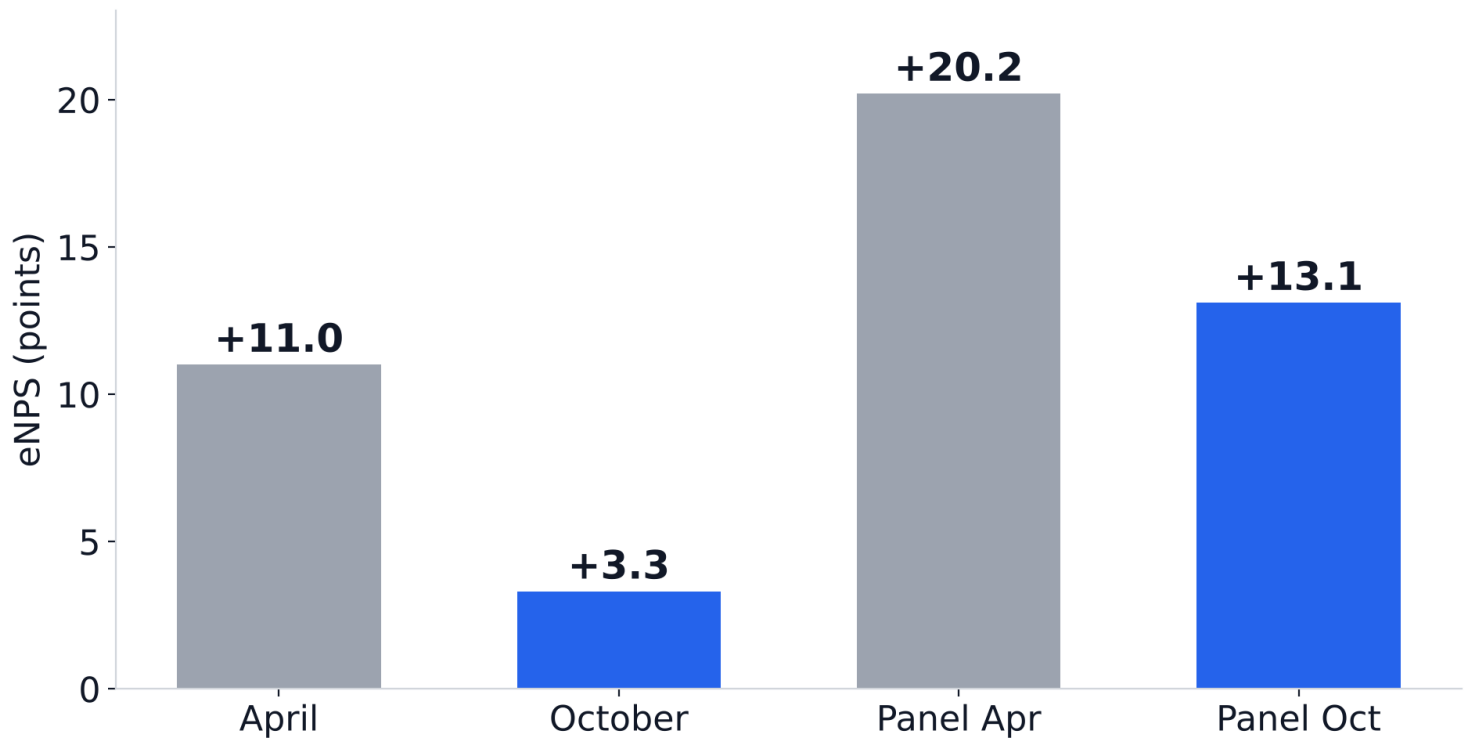

Top three asks

CHRO: manager-transition playbook for the reorganised Intercity teams (up to +3.7 pts company eNPS).

CHRO: 90-day onboarding standard for every new joiner.

TA Head: 48-hour R1 feedback rule and a 0.90× offer floor where budget allows (about 19 fewer declines).

eNPS fell 7.7 points, also for the same people — but company-wide the fall is not statistically significant; it sits in specific groups

n — April n = 866 · October n = 799 · Panel Apr n = 526 · Panel Oct n = 526

+11.0 → +3.3

Company eNPS, n = 866 / 799

+20.2 → +13.1

Same 526 people (panel)

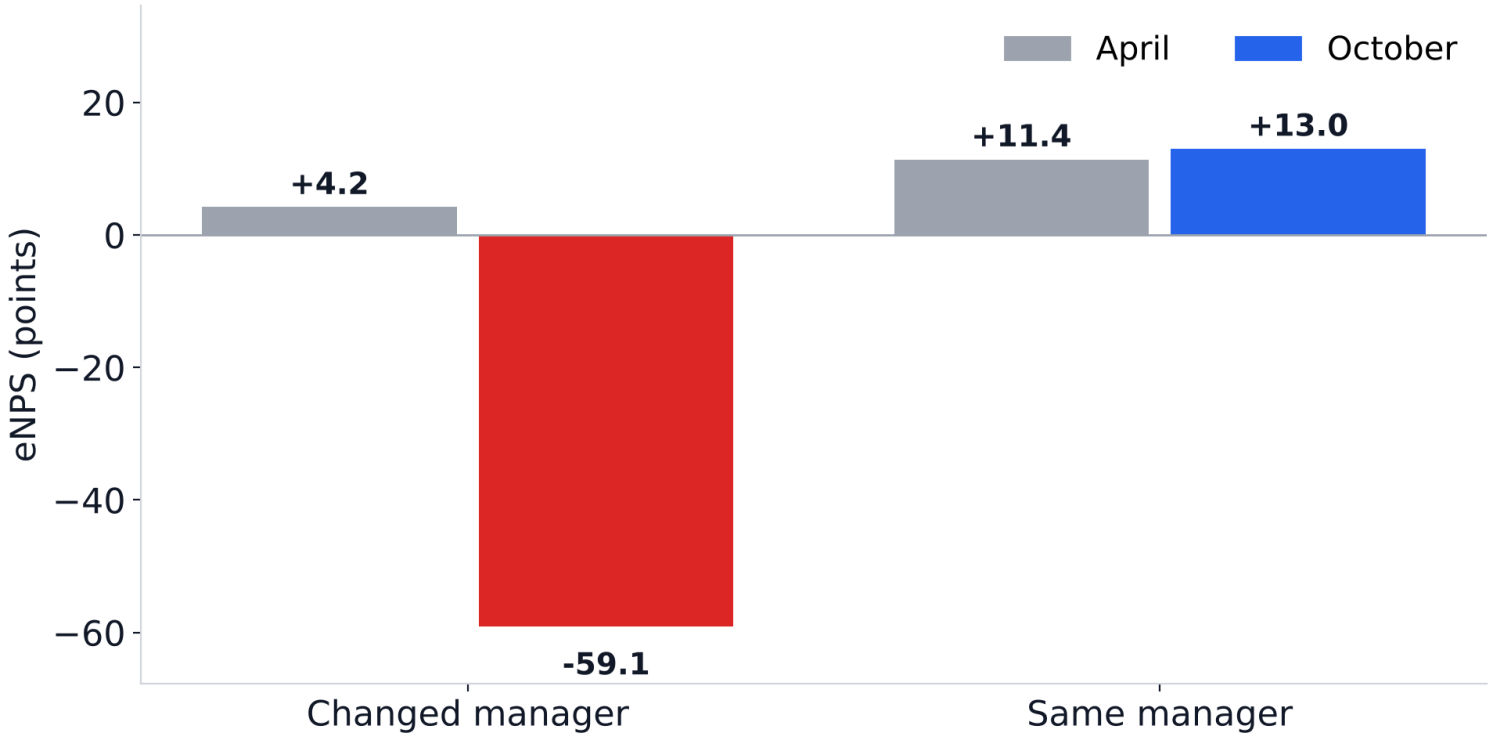

p = 0.06

Company-wide change: not significant at 5%

So what

Do not run a company-wide programme. The next slides show the fall sits in two groups that can be fixed directly.

People who changed manager are far less positive — within the same thread and grade

n — April: Changed manager 48, Same manager 818 | October: Changed manager 44, Same manager 629

-59.1

Changed manager, October (n = 44); +4.2 in April (n = 48)

62 in June

Intercity manager changes, 61 onto two managers

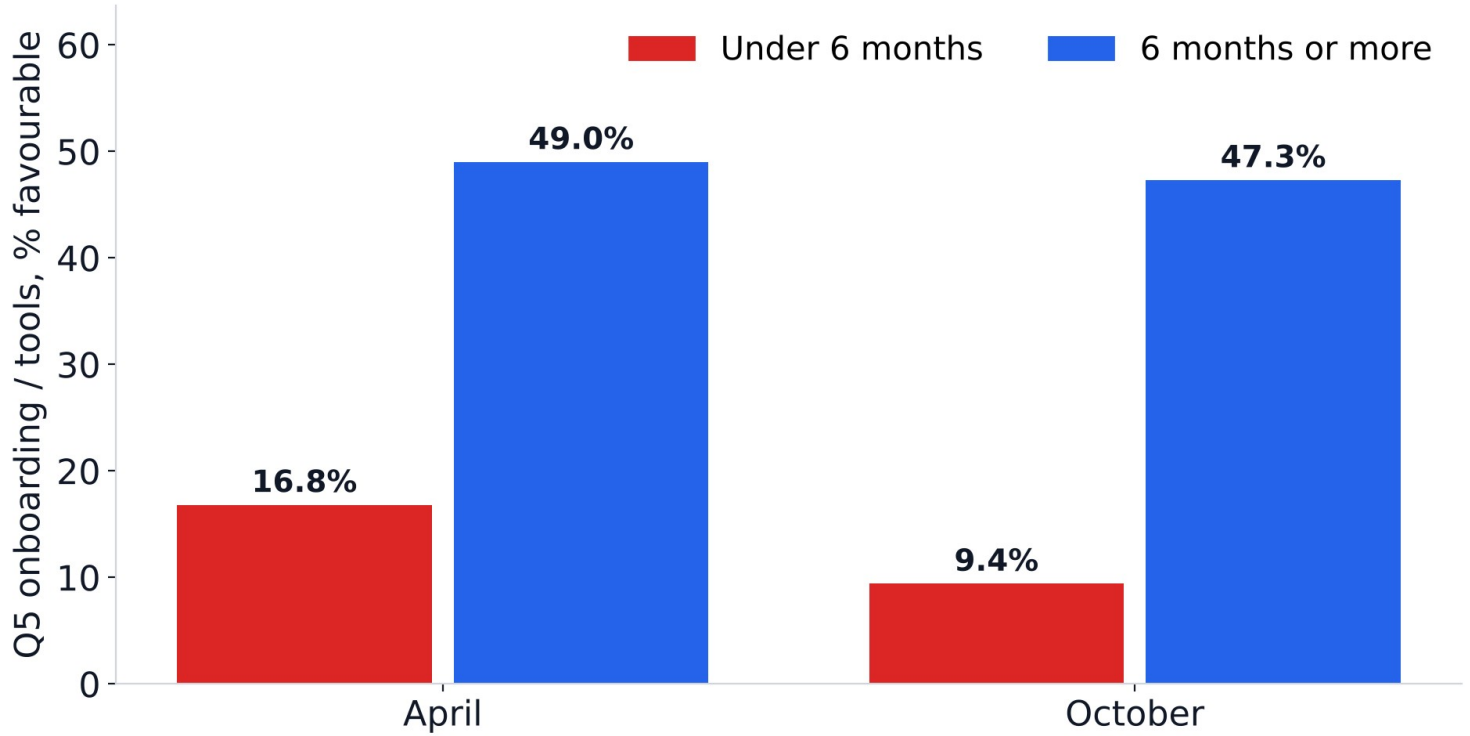

+9.6

Intercity, same manager (n = 104) vs +13.7 elsewhere — no real gap

So what

Closing the changed-manager gap alone would lift October eNPS to +7.0 company-wide and -3.1 in Intercity.

Under-6-month employees rate onboarding lowest — in both waves

n — Under 6 months: April 137, October 139 | 6 months or more: April 729, October 660

-27.3

eNPS, tenure under 6 months (n = 139)

-23.8

eNPS, new joiners on their first manager (n = 126)

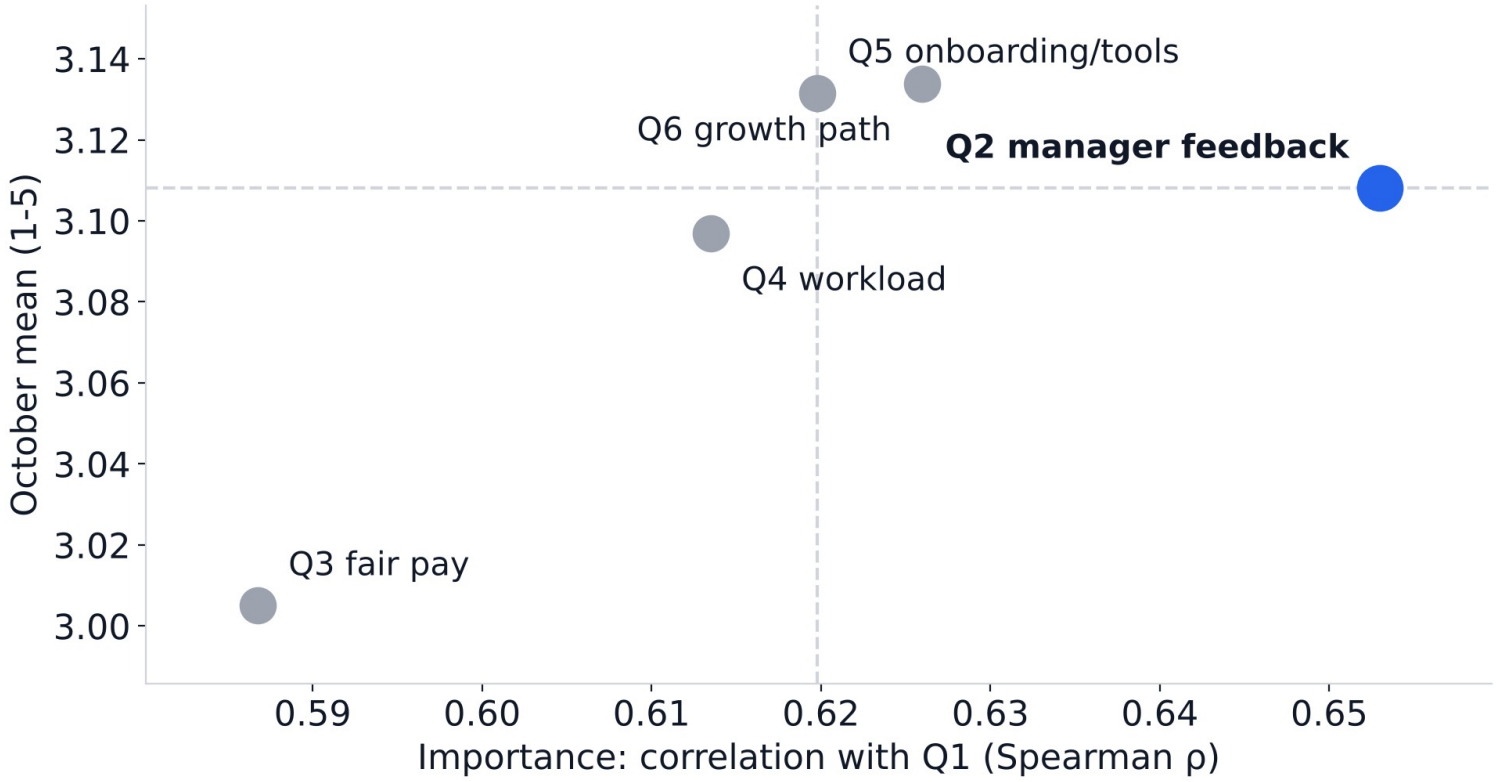

-19.4

Intercity, weakest thread (n = 186); below-band pay -7.7 (n = 207)

So what

The gap was already there in April, so it is the onboarding process, not one cohort. Closing the new-joiner gap adds up to +6.1 pts company eNPS.

Fix manager feedback first: it matters most among the low-scoring drivers

n = 796 October respondents; dashed lines = medians; bottom-right = important but low-scoring

ρ = 0.65

Q2 manager feedback: link with recommending Porter (n = 796)

9.6% → 16.7%

Comments about Manager (n = 271 / 233)

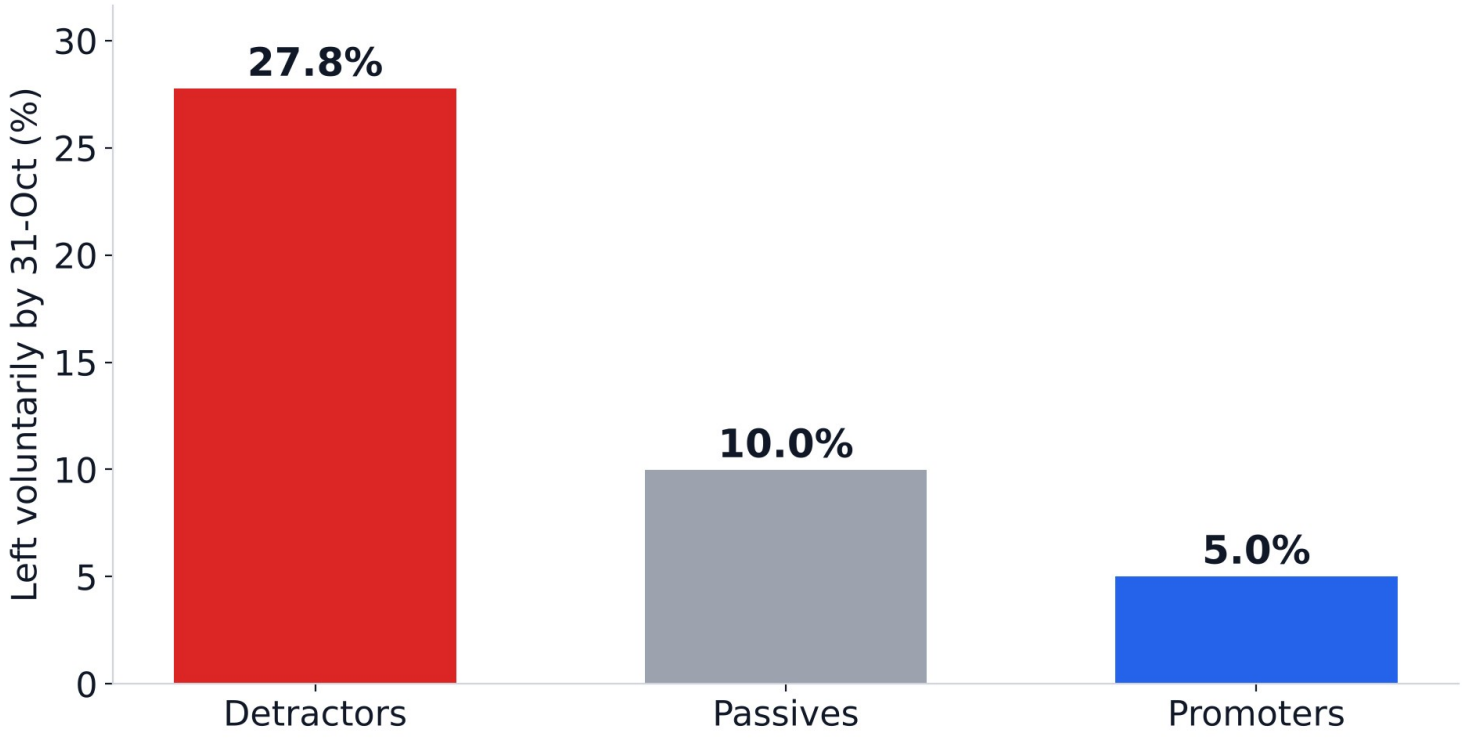

17.0% vs 42.3%

Fair pay favourable: below band (n = 207) vs at or above (n = 585)

So what

Train managers on regular feedback and 1:1s first; comments about onboarding also rose from 10.7% to 17.6%. Prioritise below-band staff in the next pay review.

April detractors left voluntarily at 6 times the rate of promoters

27.8% vs 5.0%

Left voluntarily: detractors (n = 245) vs promoters (n = 340)

21.2% vs 4.1%

Regrettable exits, same groups

16 days

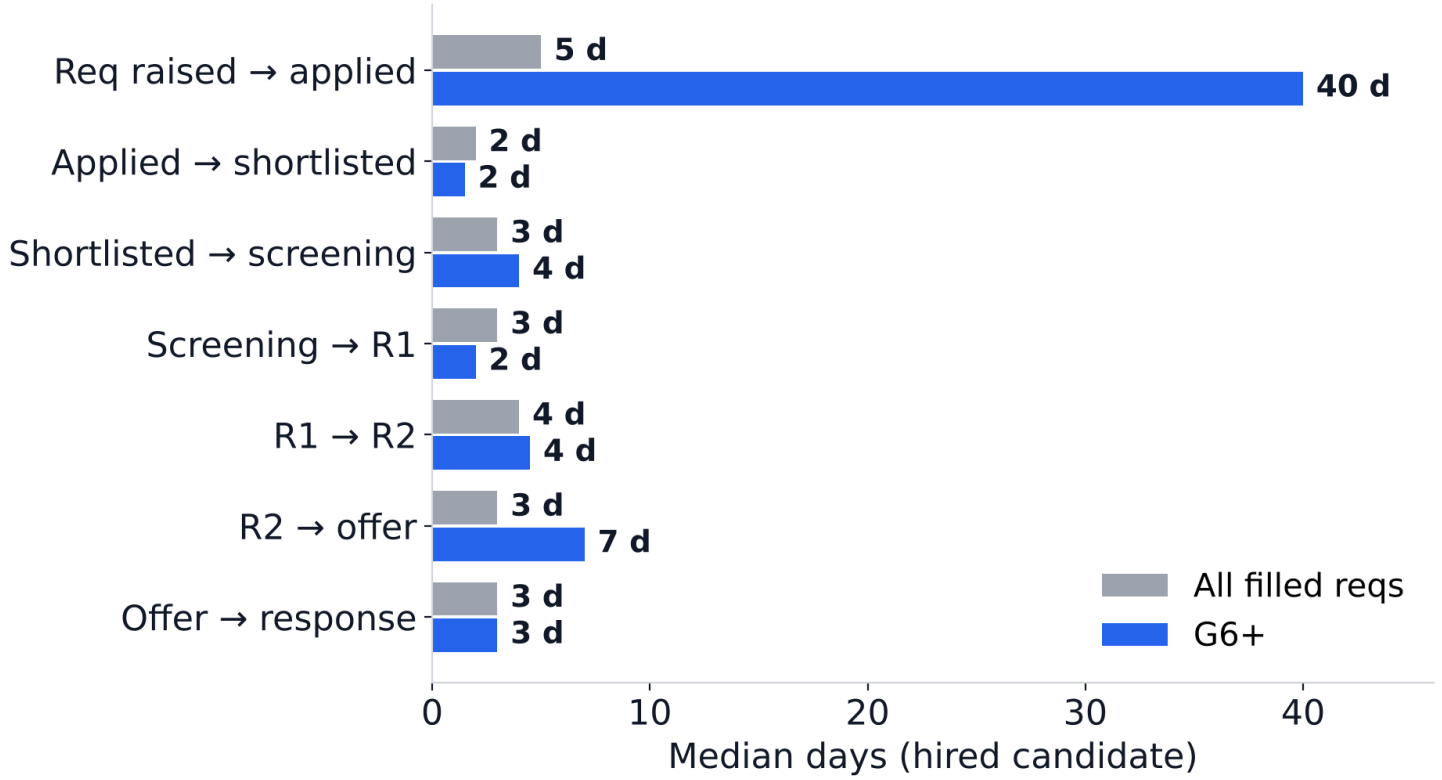

Median exit → replacement req (n = 99); 67% replace regrettable exits

So what

Use eNPS as an early warning: stay interviews in teams with many detractors after each wave, and start backfills at resignation rather than at exit.

n — Detractors n = 245 · Passives n = 281 · Promoters n = 340 · Backfill (F16): replacement reqs raised a median 16 days after the exit (n = 99); 67% replace regrettable exits

Where the days go: for G6+ roles the eventual hire applies 40 days after the req is raised (vs 5 overall); interviews take only days

n (hires with both stage dates) — All filled reqs: 229-231 | G6+: 24-24

54.2% vs 20.8%

Fills breaching SLA: G6+ (n = 24) vs G2-G5 (n = 207)

68 vs 24 days

Median time to fill, G6+ vs G2-G5 (n = 24 / 207)

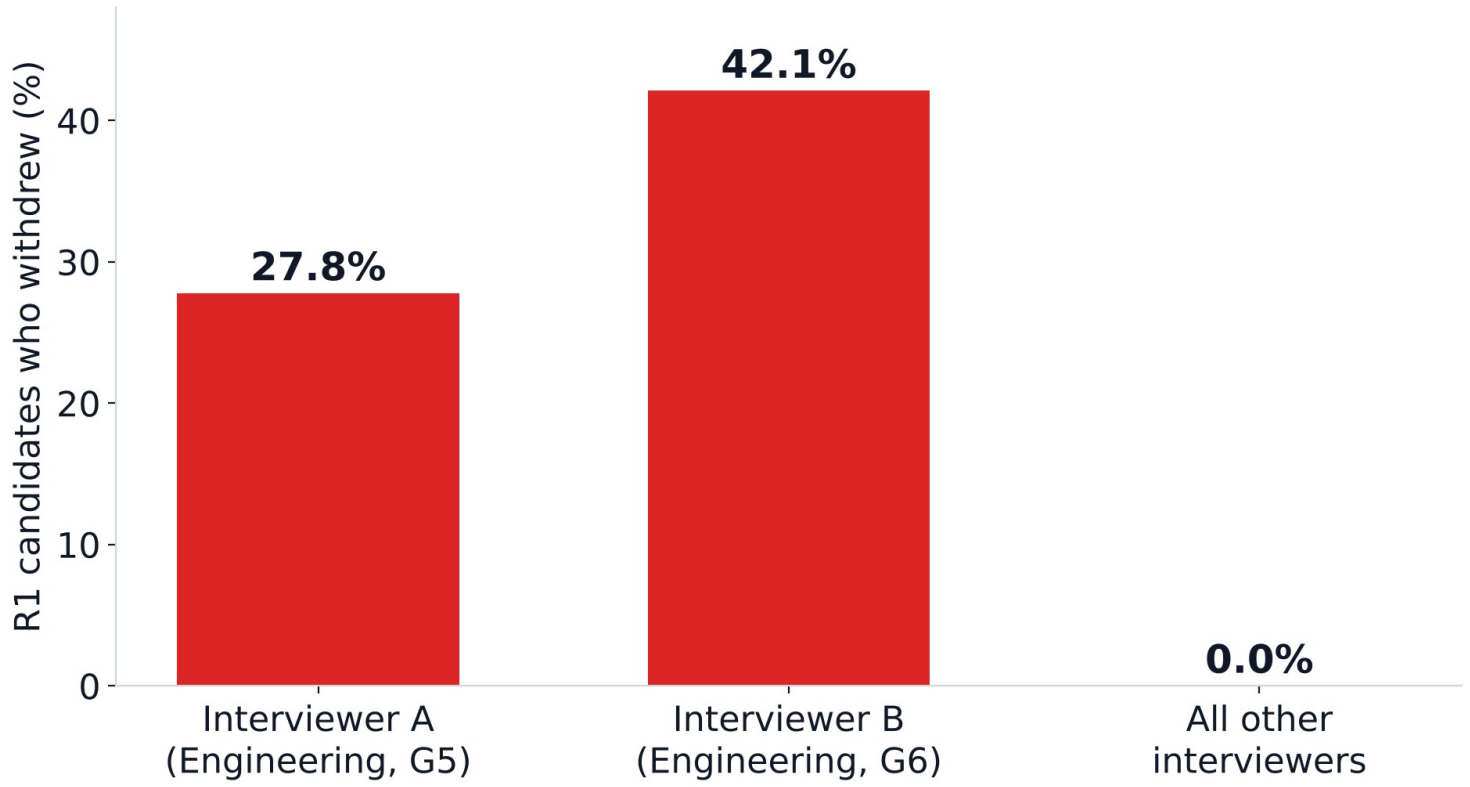

14 reqs

Marked 'Within SLA' in the ATS but breached by dates

So what

Interviews take days, not weeks. For G6+ start the search before the req is approved and pre-agree offer ranges; fix the ATS SLA rule so reports match the dates.

Two slow R1 interviewers lose candidates: every post-R1 withdrawal sits with them

n — Interviewer A (Engineering, G5) n = 18 · Interviewer B (Engineering, G6) n = 19 · All other interviewers n = 1124 · median R1 feedback: Interviewer A 12 d, Interviewer B 10 d; company 1 d

12 and 10 days

Median R1 feedback, Interviewer A and B (n = 13 and 11); company 1 day

7 waiting

Candidates on 5 open reqs still waiting for their feedback

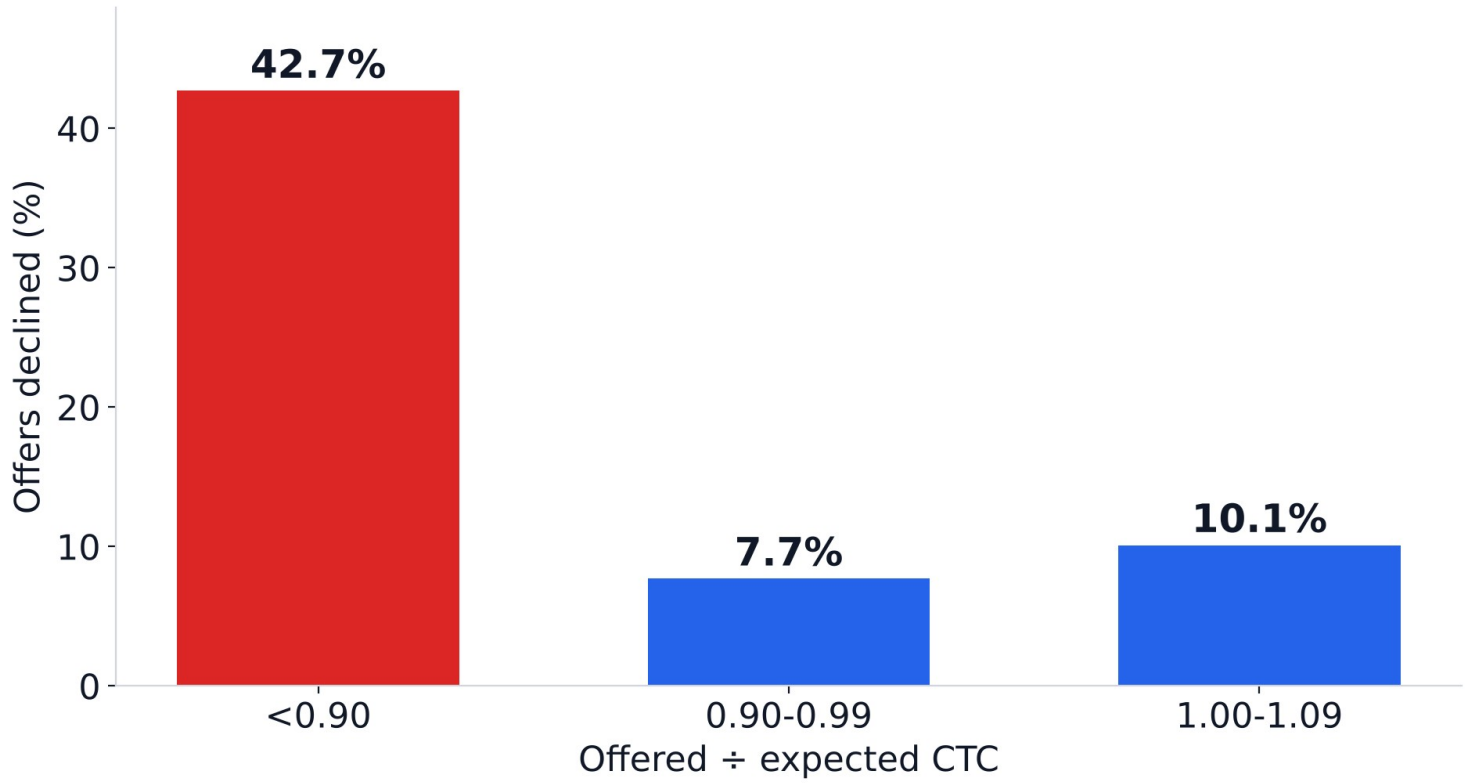

35% of reqs

Held by one recruiter (106 of 300); time to fill 23 vs 26 days — no slowdown

So what

Set a 48-hour R1 feedback rule and reassign the waiting candidates now. Faster feedback would have saved 39 days on 4 filled reqs; keeping candidates matters more.

Offers below 0.90× the candidate's expectation are declined 5 times as often — and 59 of 75 had budget headroom

n — <0.90 n = 75 · 0.90-0.99 n = 142 · 1.00-1.09 n = 79

59 of 75

Low offers that fit the budget at 0.90×; ₹8.87 lakh extra annual CTC in total

64.0% vs 86.6%

Offer acceptance: agency (n = 50) vs all other sources (n = 246)

₹44,839

Agency fee per joiner; referrals convert 10.85% of applicants vs 1.68%

So what

Set an offer floor of 0.90× expected CTC when the budget allows — about 19 fewer declines — and grow referrals and internal moves before using agencies.

Five actions, in priority order, each tied to its evidence and measurable in the next wave

Action	Owner	Expected impact	Measure next wave	Evidence
Manager-transition playbook for the June Intercity reorganisation and any future team move	CHRO	Up to +3.7 pts company eNPS, +16.3 pts Intercity	eNPS and Q2 for changed-manager staff (panel)	Slide 4
90-day onboarding standard: tools on day 1, buddy, 30/60/90 check-ins	CHRO	Q5 for joiners up from 11.2% favourable; up to +6.1 pts company eNPS	Q5 and eNPS for tenure under 6 months	Slide 5
48-hour R1 feedback rule with reminders and escalation	TA Head	Post-R1 withdrawals near zero (now 13 of 37)	Share of R1 feedback within 2 days	Slide 9
Offer floor of 0.90× expected CTC when the req budget allows	TA Head	About 19 fewer declines for ₹8.87 lakh annual CTC	Decline rate for offers below 0.90×	Slide 10
Senior-hiring track for G6+ and a fixed ATS SLA rule	TA Head	G6+ within SLA up from 45.8%; accurate SLA reports	G6+ within-SLA %; ATS mismatches	Slide 8

Every cleaning step is logged (116 rules), and the known gaps are stated, not hidden

5,815 → 5,757

Candidates in → kept

36

Orphan candidates (requisition not in the extract) excluded

14

ATS 'Within SLA' reqs that breached by dates

3

Exited employees without an exit date (left before October)

Definition used throughout

manager_status: Changed manager = Manager Effective From between 18-Apr and 04-Oct-2026 and after joining; New joiner (first manager) = in that window and equal to the joining date; Same manager = everyone else.

Limitations

HRMS keeps only current attributes and the current manager: no history of thread, grade, rating or earlier manager moves.

Survey answers are anonymous (salted key, groups of 5 or more), so individual follow-up is impossible by design.

Synthetic data covering one half-year; the ATS SLA rule and the orphan candidates' requisitions are outside the extract.
