Data quality note

Porter People Analytics case data, as of 31-Oct-2026. Every cleaning rule is logged in `data/clean/dq_log.csv` (116 rules; 71 changed data). The raw workbooks are never modified. Main items below; counts come from the log.

eNPS workbook

Issue	Rows / values	Treatment	Assumption
Duplicate employee rows (exact)	8	Dropped	—
Same ID, different Location	4	Kept the latest record	Latest record is current
Thread / grade / location / status spellings	338	Mapped to one canonical list	Only spelling variants merged
Mixed date formats (joining, exit)	136	Parsed day-first	DD/MM, not MM/DD
'Active' with an exit date	4	Set to Exited	Exit date is reliable
Exited without an exit date	3	Not invited to October; April only if joined by 06-Apr	Left before the October wave; date unknown
CTC as text (4,48,000 / 2.96 LPA)	102	Converted to rupees	—
Monthly CTC entered as annual	7	Multiplied by 12, flagged	x12 lands within 0.5-2x band mid
manager_status = Changed manager	62	Effective 18-Apr..04-Oct and after joining	Only the current manager is recorded
manager_status = New joiner (first manager)	186	Effective date = joining date	First manager, not a change
Test responses	3	Excluded	—
Respondent not in master	6	Excluded	—
Two answers in one wave	28	Kept the latest	—
Not active on wave open date	6	Excluded	—
Q1 blank or outside 0-10	18	Response invalid for all metrics	One base n per wave

Rows in → out: Employee_Master 1,322 → 1,310; eNPS_Responses 1,726 → 1,665.

Recruitment workbook

Issue	Rows / values	Treatment	Assumption
Duplicate candidate rows	22	Dropped	—
Req ID without 'REQ_' prefix	805	Prefix added	—
Orphan candidates (no requisition)	36	Excluded; kept in candidates_excluded	Belong to older reqs not in the extract
Source spellings; Vendor/Consultant	843	Mapped to 6 sources; Vendor/Consultant = Agency	All carry an agency name
Notice period as text ('2 months')	345	Converted to days	1 month = 30 days
Accepted, then backed out	14	Not a hire	Req counted filled only if refilled
Backfill raised before the exit	22	Kept	Backfill ahead of a known exit
ATS SLA status vs dates (all 'Within SLA' → breached, 2-86 days over)	14	Recomputed status used; listed as a finding	ATS rule unknown

Rows in → out: Candidates 5,815 → 5,757.

Definition used throughout — manager_status. 'Changed manager' = Manager Effective From between 18-Apr and 04-Oct-2026 and after the joining date; 'New joiner (first manager)' = in that window and equal to the joining date; 'Same manager' = everyone else.

> **Limitations.** (1) HRMS keeps only current attributes and the current manager, so thread, grade, rating and manager history are not visible. (2) Survey data are anonymised (salted key, groups of 5 or more), so individual follow-up is impossible by design. (3) The data are synthetic and cover one financial half-year; ATS SLA logic and the 36 orphan candidates' requisitions are outside the extract.
